Nutrient Deficiency/Excess Diseases Presentation

Task:

To research a disease/condition related to a nutrient deficiency or excess. This research will be presented to the class. Information from the presentations will be assessed later in the unit test.

Process:

Your presentation must include the following:
- description of the symptoms of the disease
- description of the effects of the disease
- where the disease is still prevalent in the world, or among which populations (if applicable)
- pictures of people who are suffering from the disease
- nutrient which is lacking/excessive ad the recommended daily intake (RDI)
- list of food sources high in that nutrient (to consume for deficiency or avoid for excess)
- You must also provide brief notes (1/2 page typed) the day before your presentation so I can copy them for the class

A computer and projector will be available; I would suggest using some type of presentation software. At the least overhead notes should be included in case people want to take extra notes.

YOUR DISEASE: ________________
